***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 15, the term "preferably " is recited. This expression is vague and indefinite because of the followings:

A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. See MPEP § 2173.05(c). Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949). In the present instance, claim 15 recites the broad recitation the said functionalized silica gel , and the claim also recites preferably a silica gel functionalized with diphenyl phosphine groups which is the narrower statement of the range/limitation.

Appropriate correction is required.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 7-8, and 16 are rejected under 35 U.S.C. 102(b) as being anticipated clearly by Mott et al (CA 1,338,673).

Mott et al disclose the followings(see page 18, example ):

The following ingredients were added to a 4 liter autoclave: 300 g (1.69 moles) 1-(4'-isobutylphenyl)ethanol, 840 mL methylethylketone, 2 g (0.0113 moles) palladium (II) chloride, 9 g (0.0344 moles) triphenyl phosphine, 38 g (0.34 moles) calcium chloride, 203 ml 36% HCl, 547 mL water. After flushing with nitrogen and carbon monoxide, the autoclave was pressured to approximately 700 psig of carbon monoxide. The reactor was stirred and heated to 130°C during which time the pressure inside the reactor increased to approximately 1000 psig and was subsequently maintained at this pressure during the 2 hour reaction time. After the carbon monoxide uptake was complete the reactor was cooled to room temperature and vented.

Art Unit: 1625

The contents of the reactor were removed and the two phases were separated in a separatory funnel. The aqueous phase was extracted with 500 mL ethyl acetate and the organic fractions were combined and the solvents removed on a rotary evaporator under reduced pressure. During evaporation 6.4 g (81% of theoretical) yellow crystalline  $\text{PdCl}_2(\text{PPh}_3)$  suitable for reuse, precipitated and was recovered. 0.2 g (16% of theoretical) of palladium metal was recovered by filtration of the aqueous phase. The organic product obtained was 348 g and contained 57% ibuprofen.

This is identical with the claims.
